Product categories

Sporty Rides Road / MTB / Gravel

New

Performance starts where discomfort ends. These saddles are built for riders who chase speed, distance, and new challenges. Whether on smooth tarmac, endless gravel roads, or technical trails, each model combines lightweight construction, targeted support, and freedom of movement to help you stay focused on the ride ahead.

All Journeys Riding Everywhere

These best-in-class Selle Royal products are adaptable and perfect for those who don't want to compromise on excellence – both in the city or adventuring outdoors. With the All Journeys range, premium materials and innovative technologies result in the ultimate in comfort, striking design and durability.

Adventure Time Exploring Outdoors

A breath of fresh air for all excursions. No matter if you ride for fun, fitness or touring far away: this range of saddles gives its best to help you enjoy your free time on the bike. All of these models are suitable for long rides and different types of terrain – so you can explore the wilds to your heart's content.

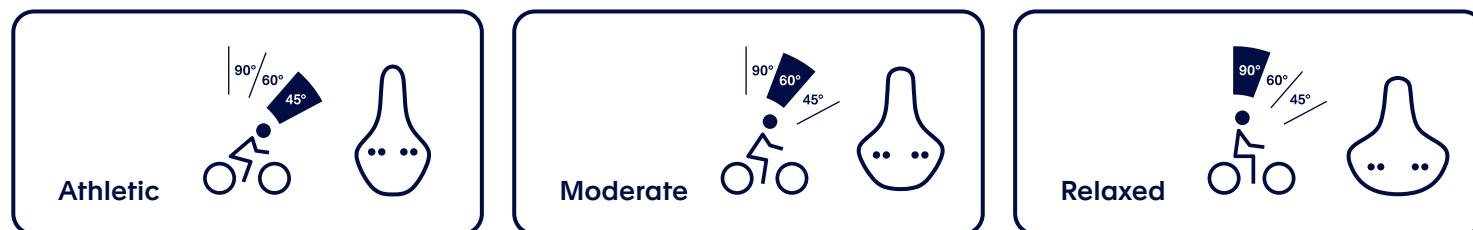

Urban Life Moving in the City

Ultimate comfort for cycling in the city. Any saddle belonging to this range will become your trusted companion for everyday life. From short rides to long commutes, from modern style to high reliability, select from many models according to your needs in the city.

Riding positions

Riding position is the crucial factor in choosing the optimal saddle. According to your riding style, the way your sit bones rest on the saddle varies substantially and this consequently affects the level of comfort. Selle Royal saddles are ergonomically designed to fit all ischial bones widths and satisfy the anatomical needs of both men and women, guaranteeing pressure relief in the most sensitive areas.

Consumers should be invited to select their riding position among **45° (Athletic)**, **60° (Moderate)** and **90° (Relaxed)** to enjoy their rides, pain-free!

30 Day Comfort Guarantee

Selle Royal offers a 30-Day Comfort Guarantee on all products.

Both on the front and on the back, the new packaging informs consumers about this risk-free offer.

Therefore, it is important that all Selle Royal partners and dealers are prepared and committed to assist consumers with the entire return procedure.

For more information or support, Selle Royal customer service is at your disposal to provide assistance!

Product features

Royal Comfort

ROYALGEL™

Superior to any other padding material for its unique formulation, Royalgel™ provides the highest level of comfort. Durable and versatile, this technology absorbs pressure and distributes it across the saddle surface, ensuring the best support for even your longest rides.

ROYALGEL™ ZOOM

Precision comfort, exactly where you need it. Our patented Royalgel™ Zoom delivers a precision-tuned approach unique to the market. Using high-resolution pressure mapping to see exactly how you interact with your saddle, the technology replaces traditional, high-mass padding with strategically positioned Royalgel™ sections. This targeted design neutralizes peak pressure only where the data demands it — significantly reducing weight while providing elite dampening.

Immediate Comfort

SLOW FIT FOAM

Ideal for short and easy rides, Slow Fit Foam is an exclusive Selle Royal technology designed to fit the shape of your body. Its memory foam formulation with a slow, bounce-back effect provides immediate comfort and ensures a smooth feeling while riding.

Firm Comfort

FOAM MATRIX

Robust yet flexible for everyday rides. If you're looking for firm and solid support during your short and easy trips, a saddle with Foam Matrix padding is the answer.

Extreme Durability

UNITECH

With padding and cover all in one piece, saddles with Unitech technology are designed to last, being highly resistant to abrasion as well as waterproof. This means that you don't need to worry about exposing your saddle to the elements, or the dangers of the city.

Waterproofness

ROYAL VACUUM

Enjoy a dry ride with a water-resistant saddle. This patented Selle Royal technology allows the saddle to be 100% sealed and substantially waterproof, even when exposed to heavy, wet weather.

Perineal Ventilation

VENTILATION CHANNEL

Don't let overheating spoil your ride: the ventilation function allows for air to flow through your saddle via an anatomically designed cut-out, ensuring a nonsweaty, breezy feeling while cycling. Designed for cool rides and reduced pressure in the perineal area.

Perineal Relief

ERGONOMIC HOLE

An ergonomic central cut-out designed to relieve pressure in the perineal area, making it ideal for the most sensitive riders. No pain, just gain on your rides!

ERGONOMIC CHANNEL

This indent is designed to ergonomically follow the shape of the body, delivering pressure relief in the soft tissue areas and support in the ischiatic zone. No pain, just gain on your rides!

High Resistance

STRENGTEX

This is an ultra-resistant cover material made to accompany the tough life of any saddle. Thanks to its multi-layer structure, your Strengetex saddle doesn't fear punctures, cuts, tears, cracks or aging and it is thus perfect for the urban jungle.

Shock Absorption

FLEXITE SYSTEM

Maximised flexibility and shock absorption are provided by the unique indented construction of the shell, ensuring smooth rides across town or into the wild.

THERMOPLASTIC DAMPER

Working like an elastomer, the Thermoplastic Damper positioned at the rear of the saddle will smooth out bumpy rides, silently absorbing even the most severe shocks.

Safe Sides

DOUBLE-COVER SIDE PROTECTION

Say no to scuffed saddle sides and lean your bike against anything in total freedom: the double-layer material applied to the sides of the saddle increases resistance against impacts and abrasions.

SCUFF GUARDS

Say no to scuffed saddle sides and lean your bike against anything in total freedom: the extra protective inserts applied to the sides of the saddle increase resistance against impacts and abrasions.

Safety at Night

REFLECTIVE FILM

Either riding in town or exploring the wilderness, it's paramount to always be seen by cars, bicycles and other vehicles. If, or rather when, your rear light fails you, for an extra dose of safety this reflective film will have your back.

Spring Suspension

DOUBLE SPRINGS

Striking look and excellent suspension, all in one: the standard springs have evolved to improve suspension performance while retaining that classic allure so you don't have to compromise on style – or bounce.

SPRINGS

Sometimes older is better: springs add great suspension and a touch of class to any bike.

Clip & Go

INTEGRATED CLIP SYSTEM

A must for your Selle Royal accessories: the Integrated Clip System positioned at the rear of your saddle will make the attachment of a Selle Royal saddle bag or other accessories an easy clip away.

MULTI-TOOL

Always be prepared for the unexpected. This multitool attaches to the rear of your Selle Royal saddle equipped with the Integrated Clip System (ICS) to always be on hand for quick adjustments and repairs on the road. Protected by an anti-shock rubber housing, this compact and secure package offers 9 tools for years of reliable use.

E-Bike Specific

E-FIT DESIGN

An innovative wave-shaped design to help you immediately find the correct position on your e-bike, its elevated rear section will prevent you from sliding backward to ensure maximum comfort for your back, while the uniquely flexible saddle sides add stability and facilitate pedalling.

Easy Handling

E-GRIP

Get a full hold on your e-bike with this smart feature: an integrated, soft touch handle that makes manoeuvring easy.

HANDLE

Designed specifically to support heavy loads, this handle provides a crucial point of control for safer handling. It makes lifting and maneuvering your bike easier every day, offering a secure grip that makes every movement feel lighter and more effortless.

Less Impact

STRACCIATELLA

Stracciatella is an innovative padding technology that incorporates saddles discarded from production. Ground into granulates and injected into new foam, Stracciatella reduces waste and boosts a circular production model. Like the famous Italian ice cream, Stracciatella can be savoured on every ride!

BIO-CIRCULAR PLASTIC BASE

This saddle uses ISCC PLUS-certified plastic, which is linked to 88% renewable raw materials derived from waste and residue streams. The bio-circular material is allocated using the ISCC mass balance approach.

Lightweight

SECTO RAIL

Structural lightness, maximum strength. This stainless steel rail features a specially engineered hollow section that reduces saddle weight without compromising durability. Resistant to wear and corrosion, it is the ideal choice for riders seeking long-lasting, high-level performance without compromise.

MN²⁵ MANGANESE RAIL

Hollow Chromoly steel core. Engineered with a hollow tubular structure, it delivers the perfect balance of reduced weight and maximum structural strength—built to withstand the most demanding rides.

Sporty Rides

Selle Royal is stepping out of its comfort zone.

For decades, Selle Royal has been the go-to choice for comfort. But who says comfort and performance can't go hand in hand?

A new category for riders who demand speed, distance, and control, but refuse to accept discomfort as part of the sport. By blending lightweight construction with advanced pressure-relief technologies, we've created a range that lets riders push their limits — not their pain tolerance.

Sporty Rides Road / MTB / Gravel

Leading the category is Musa,
the new performance saddle featuring Royalgel™ Zoom
technology. Designed to adapt under pressure,
Musa delivers precision comfort, helping cyclists stay
focused on the road ahead.
Less distraction. More riding. For everybody.

STRACCIATELLA

A new flavor in comfort

What is Stracciatella?

The new Stracciatella technology repurposes discarded saddles, breaking them down into granulates that are seamlessly integrated into new saddle foam. This process reduces waste and underscores our commitment to the environment.

Strengtex

Strengtex is built to resist cuts, tears, cracks, and aging — making it ideal for the urban jungle.

Thanks to its multi-layer structure, it's 50% more resistant to vertical stress and 30% more resistant to horizontal stress compared to standard saddle cover materials.

Its innovative design also prevents saddles from cracking in freezing temperatures, keeping the internal gel or foam intact and fully functional.

Grips

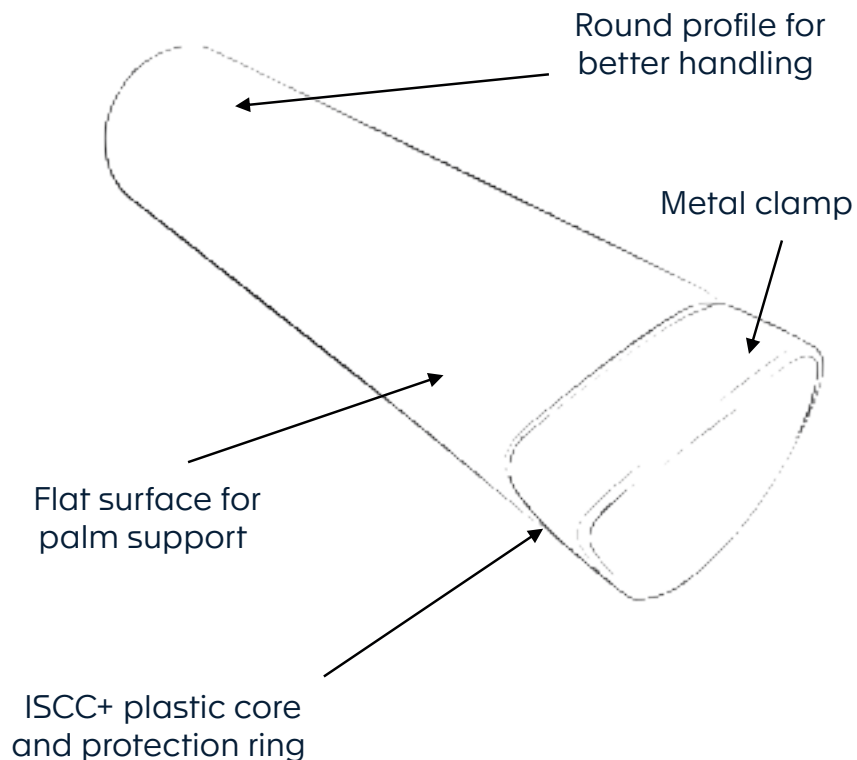

Selle Royal enters the world of grips

Nivo is an innovative new grip from Selle Royal, designed to deliver the brand's signature comfort in a distinctive look inspired by its iconic saddles.

This debut marks Selle Royal's entry into a new product category, with the objective of extending the brand's expertise—particularly in the areas of comfort, durability, and sustainability—to another key point of contact between rider and bike: the grips.

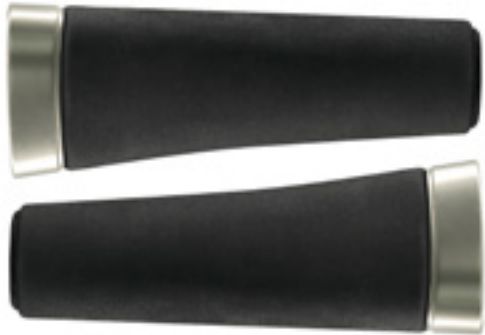

Even before their official launch, the new NIVO Grips have been recognized with a Eurobike 2025 Award, highlighting their standout design and exceptional haptic quality.

Design Features

Benefits and Features

Nivo GEL

Royal Comfort

Soft-touch feel thanks to an innovative material application that provides long-lasting comfort.

Firm Support

The flat surface promotes an ergonomic wrist position and provides broad palm support, while the rounded profile enhances handling. Suitable for all hand sizes.

No Stickiness

The unique grip material remains non-sticky over time, keeping your hands clean on every ride.

High Durability

Excellent abrasion resistance for years of intensive use.

Less Impact

These grips are made with ISCC PLUS-certified plastic, composed of renewable virgin materials derived from waste and residue streams. The bio-circular material is allocated using the ISCC mass balance approach.

Nivo

Firm Support

The flat surface promotes an ergonomic wrist position and provides broad palm support, while the rounded profile enhances handling. Suitable for all hand sizes.

Less Impact

These grips are made with ISCC PLUS-certified plastic, composed of renewable virgin materials derived from waste and residue streams. The bio-circular material is allocated using the ISCC mass balance approach.

Sweatproof

The textured surface helps keep your hands dry, ensuring a secure grip even in the hottest conditions.
